

## Self-study materials included in the self-study course Scaffolding 2–9 meters.

### **Building and civil engineering work provisions**

Provisions on Safety and Health on Building and Civil Engineering Work, together with General Recommendations on the implementation of the Provisions. Amendments up to March 25, 2014 included

### **First aid and crisis support**

The Swedish Work Environment Authority's provisions on first aid and crisis support, and general recommendations for applying the provisions

### **Protect yourself against falls from height (ADI 703). brochure**

This brochure is a support for you who will carry out work with building and construction, where falls from height can occur.

### **First aid and crisis support**

The Swedish Work Environment Authority's provisions on first aid and crisis support, and general recommendations for applying the provisions

### **Questions and answers about scaffolding**

Common questions and answers about scaffolding.

### **Risks with the use of scaffolding**

The most common accidents with scaffolding are falls from height. This is clear from the Swedish Work Environment Authority statistics. A fall from height can, however, happen in many different ways.

### **Scaffolding is used in many sectors**

On these pages you will find basic information about what scaffolding is, the risks there are with it, and how these risks can be prevented.

### **Scaffolding provisions**

Provisions of the Swedish Work Environment Authority on Scaffolding, together with General Recommendations on the implementation of the Provisions

### **Systematic Work Environment Management**

Provisions of the Swedish Work Environment Authority on Systematic Work Environment Management, together with General Recommendations on the implementation of the Provisions

### **Who is responsible when it comes to scaffolds**

The answer to the question about who has responsibility is that there can be several responsible parties, and the provisions about scaffolds are about responsibility of many different kinds. The ones mentioned here are not exhaustive – see the Swedish Work Environment Authority's provisions about scaffolds (AFS 2013:4Eng) for more information.
